

BRUCK presents its highly successful 230V track system

Subtle white for DUOLARE

BRUCK, one of the leading German lighting manufacturers, is now also offering its successful 230 V track system DUOLARE with a white surface. The new colour underlines the elegance and refinement of the system and adapts to the rooms with fitting restraint.

18 x 18 mm, painted.

“DUOLARE is among the smallest and most elegant lighting systems our company produces. With the new surface in matt white we meet the wishes of many customers who have requested the system in a subtle colour”, explains Thomas Unger, Managing Director of BRUCK. The new, extremely modish colour accentuates the already very graceful design of the track at 18 x 18 mm. It can easily be mounted directly to the

ceiling and accommodates a wide range of the manufacturer's lights. But not only the track and extensive accessories such as power feeds and connecting elements

are available in the same tone, we are now also producing one of our most popular spotlights to match: STAR / CLAREO Spot. The white-painted spotlight made of high quality brass has an insert which can accommodate various anti-glare rings. Its light head has an integrated joint that enables a swivel range of 90° and a rotation range of 360°. So the light of the spotlight can be directed where it is needed.

To ensure lasting and reliable operation of the light, the cable and the GU10 socket are welded together. STAR / CLAREO Spot is designed for max. 50W. The manufacturer recommends the use of an eco lamp QPAR 51 40W with 30% less energy consumption compared to conventional lamps.
